Introduction

What is a carbohydrate reference list?

This carbohydrate reference list can be used to help you work out the amount of carbohydrate you are eating and drinking at meal times and snacks, so that you can match this with the correct dose of insulin. The list is made up of some commonly eaten foods and their carbohydrate content.

What information does it give me? How do I navigate through the reference list?

To help you navigate more quickly and easily through the list, foods and drinks have been divided into categories, such as biscuits, takeaway foods or milk and dairy.

The amount of carbohydrate in each item has been calculated per typical serving size as well as per 100g product. As typical serving sizes tend to vary from person to person, we have included an average weight for these portions so you can use these to compare to your own typical servings.

The list specifies the amount of carbohydrate in the foods and drinks as carbohydrate portions (CPs) and as grams (g). Choose which figure is relevant to you, depending on which system of carbohydrate counting you use.

Introduction

A space at the back of the list has been left blank so that you can add any foods that you find are not in the reference list.

Where can I find out more information about carbohydrate counting?

This carbohydrate reference list is designed to be used in conjunction with the Carbs Count ebook, which you can download for free from the Diabetes UK online shop. The Carbs Count ebook provides background information on carbohydrates and how to carbohydrate count. It also covers the different types of insulin available, how they work and how each one should be adjusted according to what you eat, drink and the amount of physical activity you do.

The benefits

Learning to carbohydrate count and insulin dose adjust takes time, professional support, effort and practice.

However, once you are confident you should be able to:

- vary the times you eat and the amount of carbohydrate you eat
- predict blood glucose responses to different foods
- enjoy a wider variety of foods.

The Carbs Count ebook is for adults with Type 1 diabetes who manage their blood glucose levels with a basal bolus insulin regimen. A basal bolus regimen uses a long-acting (basal) insulin, to keep glucose produced by your liver under control, with additional short or rapid-acting (bolus) insulin, to cover carbohydrate containing food and drink.

How has the information in this reference list been calculated?

The information in this reference list has been calculated using the average carbohydrate content of products. The ingredients and carbohydrate content of products often change and so the figures stated in this reference list may not exactly reflect the carbohydrate content of your product.

For this reason it is more accurate to calculate the carbohydrate content of your meals and snacks from food labels where possible and practical.

About Diabetes UK

Diabetes UK is the leading UK charity that cares for, connects with and campaigns on behalf of all people affected by and at risk of diabetes.

- We help people manage their diabetes effectively by providing information, advice and support.
- We campaign with people with diabetes and with healthcare professionals to improve the quality of care across the UK's health services.
- We fund pioneering research into care, cure and prevention for all types of diabetes.
- We campaign to stem the rising tide of diabetes.
